

# Changelog v32 devRelease

Sudo

August 19, 2012

## 1 Changelog for dev release v32:

Issues Resolved:

1. Overloaded fileWrite and fileRead functions created. All changes in inpParams done.
2. Populate string vars for the cpuName and NICCardName created. Switching working perfectly.

Issues to be resolved:

1. Enhancement : Rather than switching the display resoluion while displaying the bootText, stretch\_blit the parent bootText image.
2. Enhancement : Create single handler for all events for selectImg – cfgSelect.
3. Create the first version of the basic gameplay.

## 2 Note to developers

It's nb0dy's birthday and I am late with the update. Sorry for that, so here it is the 32nd update. This update will be available even inthe google code dump.

Happy Coding!!!
